

To Whom it may concern,  
I believe it is in the public's interest for satellite broadcasters to be able to carry local weather and traffic, as long as it is done only through satellite and not with terrestrial-based transmitters.

The commercial radio conglomerates of today, as well as the NAB, are not out to serve the public- they are there to make money. They see satellite radio as a threat to their budgets. I believe allowing satellite broadcasters to carry locally-targeted programming is only going to bolster competition and create a more public-service oriented radio environment.

The NAB does not speak for everyone with radios- and the FCC should not be bullied. Competition doesn't harm anyone, it only helps and leads to more creative programming.

I respectfully ask that you reject the NAB's petition and allow sat-casters to broadcast uncensored.

Thank you.
